1. PROFILE INFORMATION

Field	Value
Username	NASA
Display Name	NASA
Account Type	Government
Followers	92300000
Following	117
Post Count	None
Profile URL	https://x.com/NASA

Notable Information: [Official X account for NASA, the National Aeronautics and Space Administration.', 'Joined X in December 2007.', 'The organization was born (founded) on October 1, 1958.', 'Promotes space missions, scientific discoveries (e.g., 'superbubble' in Large Magellanic Cloud), and space events like cargo spacecraft launches, spacewalks, and lunar missions (Artemis).', 'Utilizes various content formats including videos, images, and podcasts.', 'Engages with a large audience, including through specialized accounts and collaborations with other organizations.', 'Official website is nasa.gov.']

2. ACTIVITY ANALYSIS

Recent Activity: Recent activity by NASA includes sharing skywatching opportunities for September, such as the Harvest Moon and Venus's peak brilliance, and announcing scientific discoveries like a 'superbubble' in the Large Magellanic Cloud related to star formation. Updates on the Artemis program are frequent, covering Artemis III crew preparation, booster stacking, and engine integration. NASA also promotes lunar surface technologies, waste recycling challenges, and upcoming events like MAX POWER. Public posts frequently link to articles on nasa.gov and content on plus.nasa.gov, covering topics from new telescope discoveries (Hubble, Pandora Mission) to deep space network operations and aviation research.

Primary Topics: ['Space Exploration', 'Astronomy and Celestial Events', 'Artemis Program', 'Spacecraft and Telescopes', 'Space Technology and Engineering', 'Earth and Climate Science', 'STEM Education and Careers']

Common Hashtags: ['#NASA', '#Starliner', '#NASAMoonSnap', '#earth', '#moon', '#nasabudget', '#saturn', '#mars', '#artemis', '#jameswebbspacetelescope', '#iss', '#space', '#hubble', '#jwst', '#astronomy', '#universe', '#galaxy']

Activity Patterns: [Regularly posts updates on scientific discoveries and astronomical events.', 'Frequently shares mission-related news and progress, particularly for the Artemis program.', 'Promotes educational content, podcasts, and challenges related to space and STEM.', 'Shares high-quality images and links to detailed articles on nasa.gov and plus.nasa.gov.', 'Utilizes specific hashtags to categorize content and engage relevant audiences.', 'Posts appear to be made daily or every few days based on recent activity.']

Activity Confidence: High

3. RECENT / NOTABLE POSTS

1. Sep 1: "The month of September brings a new season and skywatching opportunities. You can look forward to: - The Moon pointing out stellar sights - Venus hitting peak brilliance - Seasons shifting on Sept. 22 - The Harvest Moon Happy skywatching!"
2. Sep 8: "This 'superbubble' in the Large Magellanic Cloud is over 200 light-years across—and it's helping astronomers study how stars are born."
3. Sep 2: ""They're an all-star team." In the most recent episode of Houston We Have a Podcast, Artemis III Chief Training Officer Debbie O'Connell discusses how the crew is preparing for each phase of their mission, from launch to splashdown."
4. Jun 10, 2026 (NASA Administrator Jared Isaacman): "Starting with some energy, and my inability to write brief updates, I am just extremely proud of the NASA crew, our industry, and our international partners. We are getting into a rhythm here at NASA. Earlier this year, setbacks put the Artemis II rocket back in the VAB for repairs, and we determined it was necessary to add another mission, Artemis III in 2027. Since then, we have unveiled the Ignition plans to build a Moon Base and nuclear-powered..."
5. Jan 22, 2010 (Timothy J Creamer): "Hello Twittersverse! We r now LIVE tweeting from the International Space Station--the 1st live tweet from Space! :) More soon, send your ?s."

4. IDENTITY / OSINT FINDINGS

Professional Background: ['America's civil space program and the global leader in space exploration.', 'Pioneers the future in space exploration, scientific discovery, and aeronautics research.', 'Develops advanced rockets and spacecraft, studies Earth science (including climate, the Sun, solar system, and the larger universe), and conducts cutting-edge research to advance technology and aeronautics.', 'Operates the International Space Station and aims to establish a sustainable and strong presence in space.', 'Works in space and around the world in laboratories, wind tunnels, on airfields, and in control rooms to explore fundamental mysteries and improve life on Earth.']

Organizations: ['National Aeronautics and Space Administration', 'Group on Earth Observations (GEO)', 'World Data System (WDS)', 'Earth Science Information Partners (ESIP)', 'Astra', 'Ball Aerospace', 'Bigelow Aerospace', 'Blue Origin', 'Boeing', 'Firefly Aerospace', 'Lockheed Martin', 'Raytheon', 'Rocket Lab', 'Northrop Grumman', 'Sierra Nevada Corporation', 'SpaceX', 'SSL', 'United Launch Alliance', 'Virgin Galactic', 'Virgin Orbit', 'NASA Jet Propulsion Laboratory', 'European Space Agency - ESA']

5. VERIFIED FINDINGS

- NASA is officially identified as the National Aeronautics and Space Administration.
- The official website for NASA is nasa.gov.
- NASA's core mission encompasses space exploration, scientific discovery, and aeronautics research, including Earth science and STEM education.
- NASA is actively involved in and promotes the Artemis program, focusing on lunar missions and establishing a presence in space.
- NASA regularly announces scientific discoveries, such as the 'superbubble' in the Large Magellanic Cloud, and promotes astronomical events and skywatching opportunities.
- NASA maintains an active and engaging X (formerly Twitter) account, posting regularly about missions, discoveries, and educational content.
- NASA was founded on October 1, 1958.
- NASA joined X (formerly Twitter) in December 2007.
- NASA operates the International Space Station.
- NASA collaborates extensively with various organizations, contractors, academia, and international partners.

6. CONFLICTING FINDINGS

- The Activity Agent reported a 'notable post' from 'Jun 10, 2026' attributed to 'NASA Administrator Jared Isaacman'. This post is dated in the future, and Jared Isaacman is not the current NASA Administrator.

7. CONFIDENCE SCORE

High

8. FINAL ASSESSMENT

The analysis of outputs from the Profile, Activity, and Identity Agents reveals a high degree of consistency regarding NASA's identity, mission, and operational characteristics. Multiple agents corroborate that NASA is the National Aeronautics and Space Administration, with a core mission focused on space exploration, scientific discovery, and aeronautics. Its official website is nasa.gov, and it maintains an active X account, founded in December 2007, promoting key programs like Artemis and operating the International Space Station. Extensive collaborations with various partners are also well-supported. A single significant discrepancy was found in the Activity Agent's output, which listed a future-dated post (June 10, 2026) incorrectly attributed to 'NASA Administrator Jared Isaacman'. While many specific details, such as exact follower counts, specific hashtags, and comprehensive lists of partner organizations, are mentioned by only one agent, these do not diminish the overall confidence in the verified core findings. The overall confidence in the aggregated information is High.

Disclaimer: This report is generated from publicly available information collected by the investigation agents. Findings should be independently verified before being used for important decisions.
